About Me

Career Overview

I am an experienced developer with over 7 years of experience, focusing on meaningful and complex products. My primary expertise is in **React/Next.js** and its ecosystem, though I am always eager to expand my skill set and share my knowledge.

I have experience covering the full software development lifecycle: from design approval and front-end/back-end development to database modeling, cloud deployment, and **SEO** optimization.

I actively participate in CTF competitions and hackathons, contribute to open-source projects, and take a proactive role in team environments, often acting as a conflict mediator to maintain a positive atmosphere.

Technical Skills

Front-End

- Extensive experience with modern front-end technologies, including **React** (Class & Hooks), **Angular**, and **Vue**.
- Proficient in building layouts with **Flexbox**, **CSS Grid**, **Tailwind**, and even custom table-based layouts for emails.
- Familiar with micro-frontend architecture, such as Module Federation.
- Strong grasp of **JavaScript**, **TypeScript**, **Next.js**, **Webpack**, **Rollup**, **ESLint**, **Gulp**, and **other tools**.
- Skilled in creating user-friendly **UI/UX** designs in collaboration with designers.

Back-End

- Experienced with **Node.js**, **Next.js**, **Docker**, some data base solutions.
- Developed multiple bots for Telegram, Discord, and other platforms.
- Worked with **AWS** and **DigitalOcean** for cloud deployment.
- Passionate **Linux** user.

Languages

- **English** – C1
- **Russian** – Native
- **German** – A2

Education

Moscow State University
Physics Department (*2014–2017*)

Career History

NDA

Team Lead (*Oct 2023 – Present*)

A media platform primarily based on Telegram, with a 500K+ audience and presence across various platforms.

- Leading development efforts, making key architectural decisions, and planning project growth.
